switchX

Get together on TV!

“The exchange of ideas and views becomes more important in our global world.”

Worldwide TV production

- **switchX** is a patented onlinebased system for producing and recording interactive TV-programs in PAL 16:9.
- **switchX** offers live conference on the PC monitor.
- **switchX** connects people in front of digital cameras or webcams worldwide via the Internet and “switches” between multiple (X) participants (clients) in one window.
- **switchX** enables every Client to participate in a session or TV-program recording by just one mouse click.
- **switchX** produces a cut file of the recorded program of all connected locations.

Community & Content

Talk Discussion, Talk, Interview

Events: Connecting international **switchX**points.

If you have ideas or suggestions for TV-productions contact us!

switchXcheck

My PC – my personal TV-Station

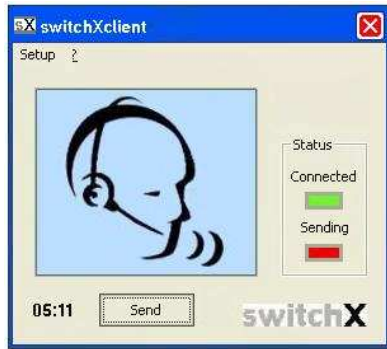

To participate in a **switchX**session you need:

- PC / laptop, Dual Core, with at least 2 x 1,86 GHz processor capacity
- Windows XP with SP3, Vista or Windows 7
- sufficient memory capacity (at least 30 GB)
- ADSL-data link with at least 384 kBit/s upload
- a digital video camera with computer link e.g. DV-Cam (HDV/DV) or highquality webcam
- directional microphone and earbuds or headset of high quality
- **switchXclient**-Software
- access to the **switchXserver**

For instructions to download and install the **switchXclient**-Software, authentication for access to the **switchXserver** and attended free tests please contact christine.fritz@switchX.at

switchXclient

One Window – One Button

switchXclient-Window

With a digital video camera and headset, connected to a high capacity PC, **switchXusers** can get together and produce a TV-program or a multipoint conference via the Internet.

switchX enables

- audio-visual real time communication (IP-teleconference) and
- transmission of audio and video sequences in broadcasting quality, PAL 16:9.

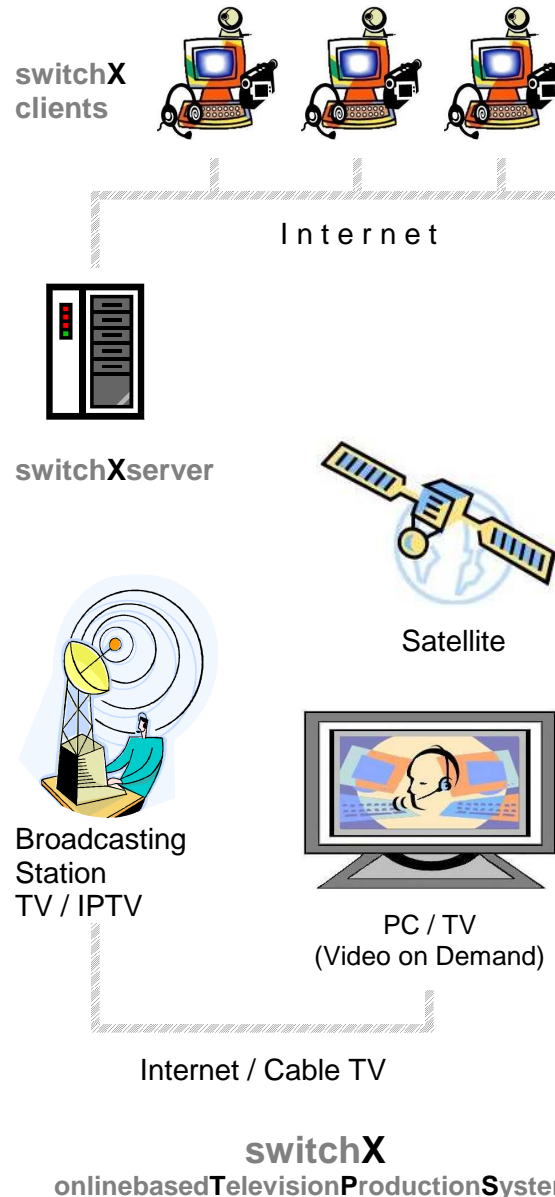

The Client clicking the Send-Button is "on air" and all participants can see him/her in the **switchXclient**-Window - „One Window – One Button“.

Voice communication via directional microphone and earbuds or headset.

The **switchXserver** verifies the Client's authentication, configures the Clients, stores and compiles the transmitted audio and video sequences and produces a cut file of the recorded TV-program/conference.
